

*How do we create
this sophisticated
part from a
steel strip?*

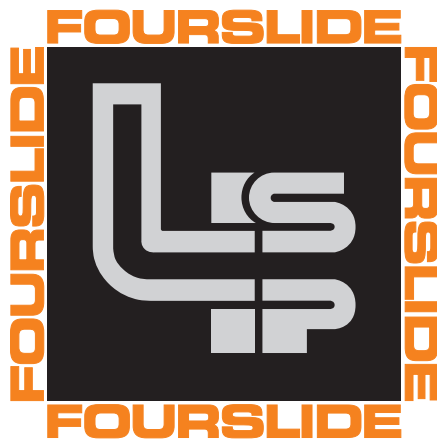

Visit our website today for a fully animated demonstration of the Fourslide manufacturing process, as well as additional sample part photographs. If you see a part that resembles your own, be sure to utilize our Photo Zoom feature for a closeup of our manufacturing capabilities.

www.fourslide.com

Because Fourslide Spring and Stamping has a production capability that can support a large number of parts per man hour, the cost of forming metal parts is kept low. Compared to other processes, tooling is far less costly, and wasted material is reduced. And because the part is stamped and formed in one process, material handling is eliminated, too, further reducing the cost per part.

We will assist you from concept through prototype, onto final design and part print, to tooling, pilot sampling and finished production components, helping you meet today's demanding work schedules. We provide delivery exactly when you need it to fit your own production requirements. Contact us, and let us show you what our metal forming expertise can do for you.

With more than 40 years of experience, Fourslide Spring and Stamping is a recognized leader in the fabrication of formed metal parts, including Fourslide-produced flat springs, metal stampings, contacts (including battery contacts) and wire forms.

We specialize in fabrications from strip (.003" to .075" thick and .020" to 2.00" wide) or wire (up to .180" dia.), in a large variety of ferrous and nonferrous materials.

www.fourslide.com

Whatever its name, if your part is a stamping or a formed part less than 2" in width, and less than .075" thick, it may be a Fourslide part.

Chances are good that we have made a part similar to yours. Visit our website to view a large selection of sample parts across many common categories, or contact us today with your requirements for a prompt quotation.

Materials

- We work with: Aluminum, Brass, Phosphor Bronze, Copper, Beryllium Copper, Nickel, Nickel Silver, Cold Rolled Steel, High Carbon Steel, Stainless Steel, Inconel and more

Plating & Finishing

- Plating and finishing with: Nickel, Electroless Nickel, Gold, Silver, Chrome, Chromate, Tin, Zinc, Phosphate, Passivation, Color Coding, Black Oxide, Teflon, Powder Coat, Epoxy/Plastic and more

Prototype

- Soft tooled prototypes can be provided to help you confirm your part's functionality

Secondary Operations

- Secondary operations include: Drilling, Tapping, Chamfering, Notching, Piercing, Forming, Welding and Wire Stripping

Assembly

- From completely manual to high-speed automation and everything in between, we can handle your assembly requirements
